

Unconditional Control/Jump Statements

- **break Statement**

break is a keyword. It is used within any control statements. It is used to terminate the execution of the current loop or switch statements.

Example:

```
public class Main {  
    public static void main(String[] args) {  
        for(int i=0; i<10; i++)  
        {  
            if(i==4)  
            {  
                break;  
            }  
            System.out.println(i);  
        }  
    }  
}
```

Output: 0 1 2 3

- **continue Statement**

continue is a keyword. It is used to continue the execution of the current loop with the next iteration.

Example:

```
public class Main {  
  
    public static void main(String[] args) {  
  
        for(int i=0; i<10; i++)  
        {  
            if(i==4)  
            {  
                continue;  
            }  
            System.out.println(i);  
        }  
    }  
}
```

Output: 0 1 2 3 4 5 6 7 8 9
